

Melicope/Euodia species

PRE-TREATMENT – Soak seeds in hot water for 3 – 4 days, ensuring to change the water daily to remove inhibitors.

SOWING – Best to sow when temperatures range from 22 - 25°C. Use a good quality seed raising media and pot into seed trays or in individual pots.

Fill pots with media and moisten media before sowing seeds 3 – 5mm deep.

Water with a fine mist spray, be careful to not dislodge seeds.

Keep warm and moist but not too wet.

Seeds should start sprouting in 3 – 4 weeks.

Ensure that the seeds stay moist and don't dry out.

Prick out seedlings when they are 5 – 10cm tall and pot on.
