

Callicarpa species

PRE-TREATMENT – Soak seeds in warm water to soften seed coat for 5 – 10 minutes prior to sowing.

SOWING – Use a good quality porous seed raising mix with added washed river sand.

Sow seed in seed trays or pots, best time to sow is in Autumn and Spring.

Sow seeds on the surface of the media and lightly cover with washed river sand.

Mist water to avoid seed disturbance.

Prick seedlings out into individual pots or into the garden when they get their 5th or 6th set of leaves.

Water regularly until established, then it will pretty much take care of itself!
