

## Arthropodium species

### Propagation

**WHEN TO SOW** – In warm areas or in a glasshouse at any time. In frost prone areas sow when danger of frost has passed.

**WHERE TO SOW** – full sun/part shade any soil garden or pot.

**SOWING** – Sow in moist fertile soil - these seeds do not require pretreatment. Sow seeds on top of media and compress lightly then cover. Keep moist. Cover with clear polythene until germination in 2 - 5 weeks.

Transplant to individual containers when large enough to handle. Keep well watered, pot on or plant out at 7.5cm. Water in well and water regularly until established and then when required in dry weather. Use a light application of low phosphate organic fertiliser. Protect from slugs and snails.
