

## Leucophyta species

### Leucophyta brownii – Cushion Bush

Leucophyta species is easy to grow from seed with out the need for any pre-treatment. Best times to propagate are Autumn and Spring, with optimum temperatures 18 - 25°C

**Pre-treatment** – None required.

**Sowing** – Use a good quality propagation mix with 1/3 perlite or washed river sand. Surface sow and cover lightly with sand or a light sprinkling of propagation mix. Water with a fine mist so seeds are not dislodged from the trays or tubes, keep soil moist but not wet.

Seeds should germinate 10 – 30 days after sowing and can be pricked out when 5 – 7cm tall and potted into tubes or pots.
