

## Syncarpia species

**PRE-TREATMENT** – No pre-treatment is required for this species.

**SOWING** – Best time for sowing is when temperatures are 18 - 25°C.

Use a good quality porous seed raising mix.

Fill pots with media and moisten media before surface sowing seeds.

Surface sow seeds or mix seeds with washed river sand and sprinkle on top of the media.

Mist water to avoid seed disturbance.

Place in a warm semi shaded position.

Seeds should start sprouting from 14 – 28 days.

Ensure that the seeds stay moist and don't dry out.
