

Xylomelum species

PRE-TREATMENT – Soak seed overnight in water.

SOWING – Use a good quality propagation mix and sow seed 3 - 5mm deep in individual tubes/small pots or trays, best time to sow is Autumn and Spring.

Water with fine mist to avoid seed disturbance.

Place in a greenhouse or in a warm shaded or semi shad position and avoid drying out.

Be sure to keep the pots warm and moist but not too wet.

Germination should occur within 30 days if grown in the right conditions.
