

## Radyera species

**PRE-TREATMENT** – Soak seed in room tepid water overnight.

**SOWING** – Best time for sowing is in Autumn or Spring.

Use a good quality porous and well drained seed raising mix and cover seeds 1 – 2mm deep.

Mist spray the seeds to ensure that seeds aren't disturbed.

Place in a warm part shaded or shaded position.

Keep media moist, don't allow to dry out but don't waterlog!

Germination can start from 10 days but can take as long as 28 days to start sprouting.
